Summary

Backend Software Engineer with 2+ years building event-driven microservices, distributed systems, and cloud-native infrastructure using Node.js and TypeScript. Drove monolith-to-microservices migration, established production observability with Prometheus, Loki, and Grafana, and reduced system-wide API latency by ~30%.

Skills

Languages: JavaScript, TypeScript, SQL, C++ (DSA / Competitive Programming)

Backend & Architecture: Node.js, Express.js, REST API Design, Microservices, Event-Driven Architecture, Async Processing, Rate Limiting, System Design

Distributed Systems & Messaging: RabbitMQ, BullMQ, Redis, Kafka, Distributed Workflows, Dead Letter Queues, Message Queue Design

Observability & Testing: Prometheus, Grafana, Loki, Structured Logging, Jest, Supertest, TDD, Integration Testing

Cloud & Infrastructure: AWS (EC2, ECS, S3, Lambda, Secrets Manager), Docker, GitHub Actions, CI/CD Pipelines, Multi-Stage Builds, Nginx

Databases & ORM: PostgreSQL, MySQL, Prisma, TypeORM, Query Optimization, Index Design, Schema Design

Frontend: React.js, Next.js, Tailwind CSS

Experience

Software Engineer

Unique School App India LLP, Pune

July 2024 – Present

Node.js, TypeScript, AWS, Redis, Docker

- Spearheaded monolith-to-microservices migration into **8 event-driven microservices** using RabbitMQ and BullMQ—defined bounded service domains, decoupled inter-service communication via distributed queues, and delivered fault isolation, independent deployability, and horizontal scalability.
- Owned architecture, delivery, and operations of **7+ backend systems**; drove service boundary and schema decisions; designed normalized MySQL schemas, owned Wonde/Twilio/SendGrid integrations with idempotent error handling, and shipped React.js and Next.js tooling aligned with backend contracts.
- Reduced system-wide API latency by **~30%** via Redis caching and async batch workflow redesign; eliminated N+1 patterns through query profiling and index optimization to sustain reliability under production load.
- Built production observability with **Prometheus, Loki, and Grafana** for metrics, log aggregation, and real-time alerting; practiced **TDD** with Jest and Supertest across unit, integration, and queue processor tests—reducing MTTR and regression risk.
- Deployed to **AWS (EC2, ECS, S3, Lambda, Secrets Manager)** via Docker multi-stage builds and **GitHub Actions** CI/CD; implemented rolling zero-downtime deployments, container health checks, and automated secrets rotation.

Software Engineer Intern — Backend

Unique School App India LLP, Pune

April 2024 – July 2024

Node.js, Express.js, MySQL, Prisma

- Shipped production REST APIs with **Node.js and Express.js**—query-optimized Prisma and TypeORM operations, Twilio/SendGrid integrations with structured error handling, Swagger/OpenAPI documentation, and production engineering standards across live codebases.

Full Stack Developer Intern

ProducTry, Pune

July 2023 – March 2024

Node.js, Express.js, React.js, MySQL

- Built backend services with **Node.js and Express.js**—RESTful APIs, relational schemas, and third-party integrations within an early-stage product environment; delivered responsive React.js and Tailwind CSS interfaces across the full product stack.

Projects

Heimdall — Distributed Job Processing Engine | *Node.js, TypeScript, BullMQ, Redis, PostgreSQL, Prometheus* | [GitHub](#)

- Production-grade distributed job engine with priority queues, exponential backoff retry, dead-letter queue handling, and job deduplication—clean separation between job definition, queue management, and worker execution for testability and extensibility.
- Prometheus metrics (throughput, failure rate, p99 latency), Loki log aggregation with correlation IDs, and Grafana alerting dashboards; **PostgreSQL** persistence with index-optimized status queries; **85%+ test coverage** via Jest and Supertest.

Collaboro — Agile Work Management Platform | *Next.js, React.js, PostgreSQL, Prisma* | [GitHub](#)

- Next.js server-side REST APIs with **PostgreSQL** via type-safe Prisma ORM—normalized sprint/task/user schema with composite indexing optimized for read-heavy query patterns.
- Chose SSE over WebSockets for real-time board updates after evaluating connection overhead and HTTP/2 compatibility; built drag-and-drop kanban, task prioritization, and PR-sharing with React.js.

Education

Vishwakarma Institute of Technology, Pune

B.Tech — Computer Science Engineering | Specialization: AI & Data Science

2020 – 2024

CGPA: 8.8 / 10
